CONDITIONS and RATES to USE for MOSQUITOES, GNATS, MIDGES, BLACKFLIES and other BITING FLIES: Do not apply this product within 100 feet (30 meters) of lakes and streams. PERMANONE RTU Insecticide is recommended for application as an ultra low volume (U.L.V) non-thermal aerosol (cold fog) to control adult stages of the listed insects in residential and recreational areas where these insects are a problem. For best results treat when insects are most active and weather conditions are conducive to keeping the fog close to the ground, e.g. wind speeds not greater than 5 mph. Application during the cool hours of the night or early morning is usually preferable. Repeat treatment as needed. Allow 24 hours before retreating. Do not apply more than once in a 24 hour period.

U.L.V. Nonthermal Aerosol (Cold Fog) Ground Application: To control Mosquitoes, Gnats, Midges, Blackflies and other biting Flies, apply PERMANONE READY-TO-USE INSECTICIDE using a standard U.L.V. ground applicator capable of producing a non-thermal aerosol spray with droplets ranging from 10 to 20 microns. The target dose rate to be applied up to 0.007 pounds of permethrin and up to 0.014 pounds of piperonyl butoxide per acre. This can be achieved under different conditions by altering the flow of insecticide from the equipment and/or the speed of the vehicle. Examples are given in the following table:

Target dose rate (lb PM/PB/acre)	Examples of application rate in fl. oz. per min. @ different vehicle speeds		
	5 mph	10 mph	15 mph
0.0045/0.009	6	12	18
0.0067/0.013	9	18	-

Vary flow rate according to vegetation density and mosquito population. Use higher flow rate in heavy vegetation or when populations are high. An accurate flow meter must be used to ensure the proper flow rate. For proper application, mount the fog applicator so that the nozzle is at least 4 1/2 feet above ground level and directed out the back of the vehicle. Failure to follow the above directions may result in reduced effectiveness.

In treatment of corrals, feed lots, swine lots and zoos, cover any exposed drinking water, drinking fountains and animal feed before application.
